PROFILE

M.Sc. candidate in Digital Electronic Systems, Amirkabir University of Technology (degree in progress; expected March 2027). Graduate coursework is in artificial intelligence: big-data processing, data analysis, machine learning, numerical optimization, neural networks, and computer vision. Master's thesis research is hierarchical classification of encrypted and malicious network traffic on MERLOT packet text, using a DistilGPT-2 router-expert architecture with LoRA specialists. Additional applied work covers document knowledge management and text-to-speech. Undergraduate training is a B.Sc. in Electrical Engineering (Electronics).

EDUCATION

09/2024 – 03/2027 (expected) Tehran, Iran	M.Sc. Electrical Engineering — Digital Electronics Amirkabir University of Technology Degree not yet awarded. Programme title is Digital Electronic Systems; AI coursework: Big Data Processing; Data Analysis; Machine Learning; Numerical Optimization; Neural Networks; Computer Vision. Thesis: hierarchical network traffic classification on MERLOT packet text (DistilGPT-2 router, LoRA experts, held-out evaluation).
09/2019 – 09/2023 Kermanshah, Iran	B.Sc. Electrical Engineering — Electronics Razi University Electronics, schematic/PCB design, and microcontroller programming. B.Sc. project: soil-moisture irrigation prototype.

EXPERIENCE

11/2025 – Present Tehran, Iran	AI Developer Daria-hamrah paytakht – Document knowledge-management pipeline: ingest PDFs and Word files and produce summaries, keywords, categories, and question-answer pairs. – Text-to-speech workflow: data preparation, experimental evaluation of synthesised speech, and Python tooling for a production-oriented pipeline. Further details are confidential.
08/2022 – 10/2024 Kermanshah, Iran	Electronics Technician PoyeshGaran Sanat Paya (pspaya) – Progressed from intern to project responsibility: Altium schematic/PCB design, Arduino firmware, prototyping, hardware testing, and documentation. – Full-time in summers; part-time during semesters.

SELECTED PROJECTS

06/2025 – Present	Hierarchical network traffic classification — M.Sc. thesis Encrypted and malicious traffic on MERLOT. Nine-class DistilGPT-2 router (application, APT, botnet, DoH, malware, Tor, VPN, web attack, website), then a specialist expert for the exact local label. LoRA adapters on a shared backbone, compared with a flat global-label baseline on a fixed split (45,000 train / 4,500 test). Coarse-type routing 97.6% accuracy; exact-label identification remains the open thesis problem (~55% end-to-end).
11/2025 – Present	Document knowledge management Industry system turning unstructured documents into reviewable structured knowledge. Related components: multi-format extraction and topic grouping of related passages.
11/2025 – Present	Text-to-speech Industry TTS work: dataset preparation, experimental evaluation of synthesised speech, and Python pipeline tooling.

SELECTED PROJECTS (CONTINUED)

2026	Ingredient-first recipe ranking Deployed recommender that ranks recipes by pantry coverage, utilisation, and rating. Live: kimiya1991.github.io/food-recom · github.com/kimiya1991/food-recom
2026	Embedding model evaluation Comparative evaluation of embedding models for RAG using cosine similarity, Recall@k, MRR, and nDCG.
2026	Marketplace and catalog extraction Web scraping and aggregation: smartphone price comparison across marketplaces, and e-commerce category/catalog extraction.
08/2022 – 03/2023	Automatic irrigation system B.Sc. Arduino prototype: soil moisture and temperature sensing, threshold-based pump control, and practical testing.
06/2024 – 08/2024	Arduino Nano paper cutter Prototype controlling a modified printer mechanism as a paper-cutting device: control logic, electronics integration, and consistency tests.

SKILLS

Machine learning. Hierarchical traffic classification, DistilGPT-2, LoRA / PEFT, neural networks, computer vision, NLP / LLMs, embeddings, RAG evaluation, numerical optimization, data analysis, big-data processing, model evaluation, PyTorch.

Software. Python, C/C++, Git, REST APIs, HTML/CSS, web scraping, MATLAB, Microsoft Office.

Electronics. Altium Designer, Arduino, PCB/schematic design, soldering, Proteus, CodeVision, Multisim, Atmel Studio, VHDL, ADS.

LANGUAGES & CERTIFICATES

English: studied 2012–2019; Cambridge English First (FCE), CEFR B2 (2019). Persian: native.

AI Developer Certificate (industry bootcamp). Arduino programming certificate.
